# Number Systems

# What are Number Systems?

**Number systems** are the technique to represent numbers in the computer system architecture, every value that you are saving or getting into/from computer memory has a defined number system.

Computer architecture supports following number systems.

- **Binary number system**
- **Octal number system**
- **Decimal number system**
- **Hexadecimal (hex) number system**

# Basic Definitions

- **Binary System:**

A Binary number system has only two digits that are 0 and 1. Every number is represented with 0 and 1 in this number system. The base of binary number system is 2, because it has only two digits.

- **Octal System:**

Octal number system has only eight (8) digits from 0 to 7. Every number is represented with 0,1,2,3,4,5,6 and 7 in this number system. The base of octal number system is 8, because it has only 8 digits.

- **Decimal System:**

Decimal number system has only ten (10) digits from 0 to 9. Every number is represented with 0,1,2,3,4,5,6, 7,8 and 9 in this number system. The base of decimal number system is 10, because it has only 10 digits.

- **Hexadecimal System:**

A Hexadecimal number system has sixteen (16) alphanumeric values from 0 to 9 and A to F. Every number is represented with 0,1,2,3,4,5,6, 7,8,9,A,B,C,D,E and F in this number system. The base of hexadecimal number system is 16, because it has 16 alphanumeric values. Here A is 10, B is 11, C is 12, D is 13, E is 14 and F is 15.

# Binary to Decimal Conversion

---

Expand Using Positional Notation

$$\begin{aligned} 100101_B &= (1 \cdot 2^5) + (0 \cdot 2^4) + (0 \cdot 2^3) + (1 \cdot 2^2) + (0 \cdot 2^1) + (1 \cdot 2^0) \\ &= 32 + 0 + 0 + 4 + 0 + 1 \\ &= 37 \end{aligned}$$

Answer: 37

# Decimal to Binary Conversion

---

Repeatedly divide by 2, consider remainder

37	/	2	=	18	R	1
18	/	2	=	9	R	0
9	/	2	=	4	R	1
4	/	2	=	2	R	0
2	/	2	=	1	R	0
1	/	2	=	0	R	1

Answer:  $100101_{\text{B}}$  (Start writing from the bottom)

# Hexadecimal to Decimal Conversion

---

Expand Using Positional Notation

$$\begin{aligned} 25_{\text{H}} &= (2 \cdot 16^1) + (5 \cdot 16^0) \\ &= 32 + 5 \\ &= 37 \end{aligned}$$

Answer: 37

# Decimal to Hexadecimal Conversion

---

Repeatedly divide by 16, consider remainder

$$\begin{array}{rclcl} 37 & / & 16 & = & 2 \text{ R } 5 \\ 2 & / & 16 & = & 0 \text{ R } 2 \end{array}$$

Answer:  $25_{\text{H}}$  (Start writing from the bottom)

# Binary to Hexadecimal Conversion

---

Use Positional Notation

Every 1 hexadecimal digit corresponds to 4 binary digits

Digit count in binary number not a multiple of 4 => pad with zeros on left

1	0	1	0	0	0	0	1	0	0	1	1	1	0	1	<sub>B</sub>
A							1			3					D <sub>H</sub>

Answer: A13D<sub>H</sub>

# Hexadecimal to Binary Conversion

---

Use Positional Notation

Every 1 hexadecimal digit corresponds to 4 binary digits

Discard leading zeros from binary number if appropriate

A	1	3	D <sub>H</sub>
1010	0001	0011	1101 <sub>B</sub>

Answer: 1010 0001 0011 1101<sub>B</sub>

# Octal to Decimal Conversion

---

Expand using positional notation

$$\begin{aligned} 37_o &= (3 \cdot 8^1) + (7 \cdot 8^0) \\ &= 24 + 7 \\ &= 31 \end{aligned}$$

Answer: 31

# Decimal to Octal Conversion

---

Repeatedly divide by 8, consider remainder

$$\begin{array}{rclcl} 31 & / & 8 & = & 3 \text{ R } 7 \\ 3 & / & 8 & = & 0 \text{ R } 3 \end{array}$$

Answer:  $37_{\text{O}}$  (Start writing from the bottom)

# Binary to Octal Conversion

---

Use Positional Notation

Every 1 octal digit corresponds to 3 binary digits

Digit count in binary number not a multiple of 3  $\Rightarrow$  pad with zeros on left

001	010	000	100	111	101	<sub>B</sub>
1	2	0	4	7	5	<sub>O</sub>

Answer: 120475<sub>O</sub>

# Octal to Binary Conversion

---

Use Positional Notation

Every 1 octal digit corresponds to 3 binary digits

Discard leading zeros from binary number if appropriate

1	2	0	4	7	5 <sub>O</sub>
001	010	000	100	111	101 <sub>B</sub>

Answer: 001 010 000 100 111 101<sub>B</sub>

# General Conversion Rules

$$\begin{aligned} 37_o &= (3 \cdot 8^1) + (7 \cdot 8^0) \\ &= 24 + 7 \\ &= 31 \end{aligned}$$

$$\begin{aligned} 37 / 16 &= 2 \text{ R } 5 \\ 2 / 16 &= 0 \text{ R } 2 \end{aligned}$$

$$\begin{aligned} 100101_b &= (1 \cdot 2^5) + (0 \cdot 2^4) + (0 \cdot 2^3) + (1 \cdot 2^2) + (0 \cdot 2^1) + (1 \cdot 2^0) \\ &= 32 + 0 + 0 + 4 + 0 + 1 \\ &= 37 \end{aligned}$$

- For any base to decimal conversion, multiply the powers of that base with each digit in question.
  - For decimal to any base conversion, divide the number in question with the base repeatedly.
  - For octal/hexadecimal to binary, or binary to base conversions, use positional notation.
    - 1 octal digit = 3 binary digits, so make groups of 3
    - 1 hexadecimal digit = 4 binary digits, so make groups of 4
- For decimal, no grouping required, just add all the numbers

# Questions?
